

Molajob

Facing the unprecedented job crisis in Africa, especially for young recent graduates, our team has developed a frustration free job search application.

The core app has three amazing feature :

Talent Profile : allow graduate to create their profile and set job preference

Job Board : allow graduate to search job based on their skills and preferences

Job application : allow user to apply for a job in “**one click**”

We launch our app in the Central and West Africa ,

Our result one month after launch, we have

100k+ downloads on Play store,

200k+ downloads on Apple store,

4.5 rating average on both platform

These stats are amazing , we will continually improve the app based on our customer feedback and we are looking to launch an Arabic version in the near future !

Finally, I would like to express my profound gratitude to team members for their great job and dedication.

Stay tuned, the best is still to come.

Duplex YOUNKAP,
Product Manager
